Testmonials

“At April MSDN magazine issue we read, that Windows Explorer Context Menu – is the best method of appending custom menu items to Windows Explorer Shell context menu. Because it was needed in my work, I advised procurement department to buy site license of it for our company and explained why. Now I and my colleagues use Windows Explorer Shell Context Menu Gold in our development. What I can say about Windows Explorer Shell Context Menu Gold? Easy to use it in development, it always works, even on all new operating systems, so with it I have no compatibility issues. Useful component, that saves time and money.”

Kevin Allen, .Net developer from Modular Computing Systems, Inc., Dallas, kevin.allen@modularcomputing.com

"Our company develop and sell wide range of hardware solutions and software for them. For many of our software

products, such as hardware-based video processing systems, we need to add custom items to Windows Explorer Shell context menu. We tried to add items to shell context menu using our own, unmanaged C++ code, but result was unacceptable - it didn't work on some computers, had problems on 64-bit operating systems, and on Windows Vista our menu items for some reason didn't shown at all. I even supposed to hire a separate full-time employee for developing and supporting of context-menu systems for our software. One of our engineers adviced to use Windows Explorer Shell Context Menu Gold. Already over a hour all our menu items were appended to Windows Explorer Shell context menu. And I was not surprised, that it is much better than all that we had done: Windows Explorer Context Menu Solutions, Inc. - is an organization, that is focused on developing of context menu systems and it developed Windows Explorer Shell Context Menu Gold for more than 5 years. It is really useful .Net component for everyone, who need to add his menu items to Windows Explorer Shell context menu." Mark Varming, Software development coordinator from Lenovo Corporation, markvarming@lenovo.com
