Supported Operating Systems

Question:

From april issue of MSDN magazine I know, that for correct showing of menu items in shell context menu, should be separately implemented support of each operating system (separatly for Windows XP, XP X64, Vista, etc.). It is very hard to do such large amount of job - add support of all modern operating systems. On what operation systems my menu items will be shown using Windows Explorer Shell Context Menu Gold?

I want to be sure, that my application will work on all new operating systems.

Answer:

Windows Explorer Shell Context Menu Gold support All types of Windows computers. Windows Explorer Shell Context Menu Gold give you ability to show your custom items in shell menu on Windows computers of all types, including all modern operating system, that are popular among of your software users:
- All types of Windows XP: XP Home, XP Standard, XP Business, XP Professional;
- All types of Windows Vista: Vista Home, Vista Standard, Vista Business, Vista Ultimate;

And that is not all - Windows Explorer Shell Context Menu Gold will show your menu items in shell menu not only on x86 (32-bit), but even on all types of x64 (64-bit) operating systems:

- All types of Windows XP x64: XP Home x64; XP Standard x64; XP Business x64; XP Professional x64;

- All types of Windows Vista x64: Vista Home x64, Vista Standard x64, Vista Business x64, Vista Ultimate x64;

Even more - we also appended support of all server and other special Windows operating systems:
- All types of Windows 2000, both x86 (32-bit) and x64 (64-bit);
- All types of Windows 2003, both x86 (32-bit) and x64 (64-bit);
- All types of Windows 2008, both x86 (32-bit) and x64 (64-bit);

How about future operating systems? - You ask.

Microsoft Corporation release new Windows family operating systems every 2-4 years. In direct contact with Microsoft Corporation Development and Integration Center, we append full support of all new operating systems - before they will be released. So, with Windows Explorer Shell Context Menu Gold you may be sure - all your custom menu items will be shown in Windows Explorer Shell context menu on all computers of all your customers. Directly as you want and Always.

Question:

Are any special requirements for installing, showing and changing of my custom memu items? I heared, that for appending of my, custom menu items to Windows Explorer context menu, are needed some special conditions, such as administrator rights. How about Windows Explorer Shell Context Menu Gold?

Answer:

We created Windows Explorer Shell Context Menu Gold for you to add all your custom menu items to Windows Explorer Shell context menu - add menu items easily, no special requirements. It just work. Using our innovative EasyMenu technology, created in association with Microsoft Research and

Integration Center, we give you ability to install (add), change and reorganize all your custom menu items on-the-fly, even running under the restrictive user (for example, standard user or even guest) account. So, you menu items will be shown and may be installed and modified under any user account, even such restrictive as guest account. Whatever operating system and account type your user use - with Windows Explorer Shell Context Menu Gold your menu items will be always shown directly as you want.
